AI-Assisted Development Disclosure — Project Atlas

Yes, I have disclosed the AI tools I used while developing Project Atlas.

I used **ChatGPT** to understand the project requirements, organize the project structure, and plan the main components and workflow. I used **Antigravity** as my AI-assisted coding tool to help implement the project.

These tools supported my learning and development process. I understand that I am responsible for reviewing the code, checking the results, and being transparent about which features have been completed and tested.

In summary, I used ChatGPT for structural understanding and planning, and Antigravity for coding assistance.
